

Tiny Gardens

A Step-by-Step Guide

Presented by
Refarmers & Abundant Earth Foundation
Drawings by Indigo Robinson

By yourself or with a friend, start filling your sack - 50% compost and 50% soil

Water and shake so that the stuff inside gets compressed

Then continue to fill the sack with soil and compost until you have reached the top

Once your sack is full and feels sturdy, make cuts and plant, keeping in mind how big your plants will grow

Once seedlings and seeds are planted, water generously

In a little while you can eat fresh kale, swiss chard, spinach, strawberrries, beans, much more from your Tiny Garden

And be sure to share with your friends and family!
